INTRODUCTION

In today's world, where technology is everywhere, being able to use computers is very important. It isn't just about using smartphones, laptops, or the internet. To be truly digitally literate, you need to know how to communicate professionally online, judge information carefully, keep your personal information safe, and use digital platforms in a responsible way. These skills are very important for students because more and more, digital tools are needed for schoolwork, working together, and getting jobs. Technology is a big part of daily academic life, from turning in homework online to making professional profiles. So, being digitally literate means not only knowing how to use technology but also being aware, moral, and responsible when you use it.

This course has 5 main areas that look at Digital Literacy. The first one is about getting students to understand digital tools and how they can help them in school. The second focuses on making a professional digital portfolio and keeping a good online presence. The third one talks about coding and collaboration platforms that help with schoolwork. The fourth module talks about how to write professional emails and how to communicate responsibly. The fifth module talks about being aware of cybercrime and staying safe online. These areas together show that digital literacy includes knowing how to use technology, acting professionally, working with others, and being aware of cybersecurity issues.

OBJECTIVES OF THE PROJECT

As a Student Digital Ambassador, this project helped me understand how digital literacy is not just about using phones or laptops, but about using them in the right and responsible way. Earlier, I was using many digital platforms, but I never thought much about building a professional presence or maintaining proper online communication. Through these five modules, I understood these aspects more clearly.

The first task helped me understand what digital literacy actually means and why it is important for students.

The second task guided me in creating my digital portfolio on platforms like GitHub and LinkedIn, which made me realize how crucial and significant it is to maintain a professional profile from the first year itself.

The third task introduced coding practice and collaboration tools, which showed how technology can support learning.

The fourth task helped me improve my email writing skills and understand proper etiquette.

The fifth task made me more aware of cybercrime and online safety.

Overall, this project made me more careful, confident, and responsible while using digital platforms.

Main Objectives of the Project:

- To understand the real meaning and importance of digital literacy.
- To create and maintain a professional digital profile.
- To explore useful academic and coding platforms.
- To improve professional communication skills.
- To learn about cybercrime and online safety practices.
- To develop responsible digital habits as a student.

TASK-1: DIGITAL LITERACY AWARENESS INFOGRAPHIC

AIM:

The aim of this task was to create a simple and clear infographic to spread awareness about digital literacy among students. It was meant to explain why digital literacy is important in our academic and daily life.

METHODOLOGY / TOOLS USED:

I used Canva to design the infographic. I selected a simple canvas (Academic-Infographic) and then added the text, icons, and colours according to my content. Canva was easy to use because it provides many design elements. I arranged the content properly so that the page did not look too crowded.

DESCRIPTION:

My infographic is titled *"Becoming a Smart Digital Citizen."*

It is divided into three main parts. The first part explains what digital literacy means, such as finding correct information, using digital tools properly, creating content responsibly, and thinking carefully before believing or sharing anything online.

The second part talks about useful digital tools for students, like tools for productivity, research, and planning. I mentioned how these tools can help improve academic work and make tasks more organized.

The third part focuses on safe internet practices. It includes points like using strong passwords, identifying phishing links, managing privacy settings, and checking sources before trusting information.

At the end, I added a short message: *"Learn Smart. Stay Secure. Grow Digitally."* to summarize the overall idea.

SKILLS LEARNED:

Through this task, I learned how to present information in a simple and structured way. I understood how important it is to keep content clear and not overload a design with too much text by keeping it very concise. I also improved my basic designing skills, like arranging sections properly and choosing readable fonts. Overall, my digital designing skills were enhanced which will help me in future tasks.

DIFFICULTIES FACED:

The main difficulty was selecting what to include and what to leave out, because digital literacy covers many topics. It was challenging to fit everything into one page without making it look crowded. I also spent some time adjusting the layout and the shapes, so that all sections looked balanced.

TASK 2: STUDENT DIGITAL PORTFOLIO

AIM:

The aim of this task was to create and improve my professional digital presence by setting up profiles on important platforms that are useful for academic growth and future career opportunities.

METHODOLGY / TOOLS USED:

For this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle.

DESCRIPTION:

On GitHub, I created my profile and added a README introducing myself, including my name, branch, year, and what I aim to learn. GitHub is mainly used to showcase projects and technical work, and it helps in building a coding portfolio.

On LinkedIn, I completed my education details and made my profile more professional. LinkedIn is useful for networking, connecting with professionals, and exploring internship opportunities.

On Kaggle, I created a profile to explore data science and practice problem-solving. It is mainly used for datasets, competitions, and improving analytical skills.

FUTURE PLANS ON USAGE:

Over the next four years, I plan to regularly update my GitHub with projects, stay active on LinkedIn to build connections and learn from others, and use Kaggle to improve my problem-solving and data-related skills.

This will help me for my Placement-drive, and overall personality development for a organized career planning.

SKILLS LEARNED:

Through this task, I realized the importance of building a professional online presence from the first year itself. Earlier, I did not think much about maintaining digital profiles, but now I understand how these platforms can help in internships and placements. This task also made me more confident about presenting myself professionally online.

DIFFICULTIES FACED:

Initially, I was confused about what details to include and how professional my profile should look. Writing the GitHub README was slightly challenging because I was unsure how to introduce myself properly. On LinkedIn, understanding different sections and filling them correctly also took some time. However, after exploring the platforms properly, it became easier.

TASK 3: CODING AND COLLABORATION PLATFORMS

AIM:

The aim of this task was to get practical experience with a coding platform and a collaboration tool. It was done to understand how these platforms can support learning and academic activities.

METHODOLGY / TOOLS USED:

1. HackerRank: I practiced solving a basic programming problem by writing and running code directly on the platform. I carefully followed the instructions and corrected small mistakes until the solution worked properly.

2. Google Forms: I built a quiz from scratch by selecting question types, entering options, and adjusting settings. I also tested the form to ensure responses were recorded correctly in the spreadsheet.

DESCRIPTION:

Part A – HackerRank

In this part, I created an account on HackerRank and attempted a beginner-level coding challenge. I chose a basic problem to understand how the platform works. The challenge required writing simple code and following the given input and output format. After completing it, I checked my result and score.

Part B – Google Forms

In this part, I created a Google Form titled “Digital Literacy Awareness Quiz.” The form contained exactly five questions, including multiple-choice and short-answer types. The questions were related to digital literacy and safe internet practices. I also viewed the responses in the linked Google Sheet to understand how data is collected automatically.

SKILLS LEARNED:

Through this task, I improved my logical thinking and understood how online coding platforms function. It gave me more confidence in solving programming problems systematically by breaking them down step by step. Creating the Google Form helped me understand how digital tools can be used to collect information in an organized way.

Academically, HackerRank will help me practise coding regularly and improve my programming skills. Google Forms can be useful for creating surveys, quizzes, or collecting project data in the future.

DIFFICULTIES FACED:

While solving the HackerRank problem, I was confused about the input and output format at first. Small mistakes in syntax also caused errors.

In Google Forms, I had to check the settings carefully to make sure everything was correct. After trying a few times, it became easier.

TASK 4: PROFESSIONAL EMAILS & ETIQUETTE GUIDE

AIM:

The aim of this task was to understand how to communicate professionally through email and to learn the basic rules of responsible digital communication.

METHODOLOGY / TOOLS USED:

While writing the emails, I followed the standard email format, including subject line, salutation, body paragraph, and sign-off. I focused on keeping the message clear and polite without making it too long.

For the social media checklist, I listed practical points based on common online behavior, such as maintaining privacy, thinking before posting, and avoiding inappropriate content.

DESCRIPTION:

In this task, I wrote two professional emails and created a social media Do's and Don'ts checklist.

The first email was written to a professor requesting an extension for an assignment submission. In this email, I included a clear subject line, proper greeting, reason for the request, and a respectful closing.

The second email was written to an internship coordinator expressing interest in a summer internship opportunity. I kept the tone formal and structured, mentioning my interest and requesting further information.

Along with this, I created a checklist containing at least five Do's and five Don'ts for responsible social media usage as a college student.

SITUATION WHERE POOR DIGITAL COMMUNICATION CAUSED A PROBLEM:

One common situation I have observed is when a student sends an email to a professor without a proper subject line and writes the message in a very informal way, such as using short forms or incomplete sentences. Because of this, the professor may misunderstand the request or may not take it seriously. In some cases, emails without proper subjects are ignored or lost among many others.

This problem could have been avoided by writing a clear subject line, using a respectful greeting, explaining the request properly, and ending with a professional sign-off. Simple attention to structure and tone can prevent misunderstandings.

SKILLS LEARNED:

Through this task, I learned how important tone and structure are in professional communication. I understood that even small mistakes in subject line or greeting can create a negative impression.

Academically, this will help me while communicating with professors, coordinators, and during internship applications. It also made me more careful about what I post on social media.

DIFFICULTIES FACED:

The main difficulty was maintaining a balance between being polite and being clear. Initially, I was unsure how formal the email should be. I also had to check whether my subject lines were appropriate and specific enough.

TASK 5: CYBERCRIME AWARENESS CASE STUDY & PREVENTION GUIDE

AIM:

The aim of this task was to understand how UPI and online payment frauds happen and to become more aware of safe digital payment practices.

METHODOLOGY / TOOLS USED:

To complete this task, I first researched common UPI fraud methods and read about real-life incidents. Then, I structured the case study in a PDF File, in a clear way by explaining what UPI fraud is, how it happens step-by-step, who is usually targeted, and its consequences.

After that, I created a prevention checklist in a .md file with practical and actionable tips, especially focusing on financial safety and UPI precautions.

DESCRIPTION:

For this task, I selected UPI fraud as the cybercrime topic. I studied how fraudsters trick people through fake calls, phishing links, and false payment requests. Many people, especially students and elderly users, become victims because they are not fully aware of how these scams work.

The case study explained how a fraudster sends a fake “collect request” or pretends to be a bank official and asks for OTP or UPI PIN. Once the person shares sensitive information or approves the request, money gets deducted from their account. I also included a prevention checklist with important safety measures and mentioned the National Cyber Crime Portal and helpline 1930 for reporting such cases.

REFLECTION:

While researching UPI fraud, what surprised me the most was how simple the tricks used by fraudsters actually are. In many cases, they do not use advanced hacking methods. Instead, they create panic or urgency by pretending to be bank officials, delivery agents, or customer care representatives. Many victims lose money just because they trust the caller or click on a fake link without thinking. I was also surprised to learn that even educated people become victims because the fraud messages look very genuine.

After learning about this, one habit I will definitely change is approving payment or collect requests without checking them properly. Earlier, I did not always pay close attention to the details of the request. Now, I will carefully verify the UPI ID, avoid clicking unknown links, and never share OTP or PIN under any circumstances.

SKILLS LEARNED:

Through this task, I became more aware of how easily online payment fraud can happen if we are not careful. I understood the importance of not sharing OTPs or UPI PINs with anyone and checking payment requests carefully before approving them.

This knowledge is very useful in daily life, especially as students who frequently use UPI for payments. It also helped me become more cautious and responsible while handling digital transactions.

DIFFICULTIES FACED:

The main difficulty was understanding how to clearly explain the fraud process in simple words without making it too technical. I also had to ensure that the prevention tips were practical and relevant for students.

CONCLUSION

Overall, this project helped me understand that digital literacy is much more than just using technology. It includes building a professional online presence, communicating properly, collaborating using digital tools, and staying safe from cyber threats. Through all five tasks, I was able to apply what I learned in a practical way instead of only reading about it. I became more confident in using platforms like GitHub, LinkedIn, HackerRank, and Google Forms. I also developed better awareness about email etiquette and online safety. This project has improved my digital habits and prepared me to use technology more responsibly in the future.

Key Outcomes from Each Task

- **Task 1 – Infographic:** Learned how to present important information in a clear and visually structured format.
- **Task 2 – Digital Portfolio:** Built my professional online presence on GitHub, LinkedIn, and Kaggle.
- **Task 3 – Platforms:** Improved basic coding practice and learned how to create and manage online forms for collaboration.
- **Task 4 – Email Etiquette:** Developed better understanding of formal communication and responsible social media behaviour.
- **Task 5 – Cybercrime Awareness:** Became more cautious about UPI fraud and improved my awareness of online financial safety.
